

Nevada Dental ASSOCIATION

Full Notice:

The NDA believes in personal freedom but also encourages dental professionals to be vaccinated for COVID-19 and other infectious diseases.

The American Dental Association and the Nevada Dental Association strongly encourage dental professionals to be vaccinated for COVID-19 and other infectious diseases. Recent ADA Health Policy Institute data found nearly 90% of dentists report being fully vaccinated for COVID-19 while 93.4% of dentists report receiving at least one dose.

Health and safety have been top priority throughout the pandemic, and dentists have played an important role in reducing the risk of COVID-19 and building patient confidence in dental visits. According to the ADA Health Policy Institute, 88% of consumers have recently visited the dentist or are ready to go. Dental offices are continuing expanded safety protocols to protect both patients and dental team members to help prevent spread of the virus.

COVID-19 vaccination reduces the risk of contracting COVID-19 and its potentially severe complications. The Nevada Dental Association will continue to help dentists prioritize infection control measures to minimize the risk of COVID-19 transmission regardless of vaccination status of patients and practice staff.

For more information visit www.nvda.org or contact the NDA at info@nvda.org.

Sincerely,

Nevada Dental Association
